

Shots simulator makes teaching interesting

“Shots simulators have brought us convenience and interestingness in teaching,” said Wang Xuefang, a teacher at Hubei Polytechnic Institute, at the 1st Sinapse Asian Print Simulator User Meeting at Beijing Institute of Graphic Communication on 22-24 April.

Wang Xuefang, Hubei Polytechnic Institute

In April 2009, Hubei Polytechnic Institute purchased Shots simulators for use in teaching. Although they were merely three sets of Sheetfed Offset Simulators, they brought both teachers and students great joy. From installation to practical training, students observed carefully, listened to the lecture attentively and practised seriously. With the simulation system, students now can easily complete in training rooms the projects that had to be carried out in printing shops previously. The systems indeed brought great convenience for teaching at printing schools and profession training. Now, Hubei Polytechnic Institute uses the Shots simulators in teaching courses including printing technologies and advertisement design and production. Students majoring in printing technologies can master the basic operation steps of sheet-fed presses through simulation training, while those in advertisement design and production or other relevant fields can have a quick and accurate understanding of printing technologies by operating the simulation system. In addition, with the system, teachers of printing technologies are able to give lectures more vividly so as to improve teaching quality, and carry out scientific research or profession training.

Sinapse

Print Simulators

The Shots simulator not only facilitated teaching, but also enhanced students' interests and confidence in learning. The simulator, with a user-friendly interface, demonstrates powerful and sophisticated printing technologies in a simple and interesting way, stimulates students' learning initiative and as a result develops their ability for analyzing and solving problems.

Practical training in class

Finally, Wang noted sincerely that “the Shots simulation system will make academic teaching and training more convenient if it can integrate relevant prepress software into it to simulate the complete printing process, and will further facilitate extensive education if it can incorporate more advanced network technologies to enable operations simultaneously at multiple terminals.”
